

Go with the curve!

## Curve - Corners for Drywall Baseboard Trim

We heard you! Trim work on curved corners is a pain. In order to simplify it we offer pre-shaped, laminated wood corner trim sections.

The trim is 5/8" thick with an internal radius to match the Curve panels and a rounded top. Specify height from 2" to 12". 1/4" to 1/2" higher than the base trim provides a nice feature corner. Install with baseboard adhesive, prime & paint. Less work than traditional square corners – no miters to cut.

Or for a seamless match, we can supply the trim as blanks for you (or a local millwork shop) to rout to your exact baseboard profile.
